

COMPLETE MANAGEMENT

Business & Organizational Management / Gestion

Upper Secondary / Terminale Coursebook

Management • Business Organization • Marketing • Finance • Operations • Human Resources

30 Complete Lessons • Practice Activities • Revision Tests • Answer Key • Reference Tables

Course Purpose

A structured 80-page management book for classroom teaching, independent study, business fundamentals, and exam preparation.

GETTING STARTED

How to Use This Book

A practical roadmap for learning management through concepts, cases, calculations, and decisions.

What You Will Learn

- Core management concepts from organization and leadership to operations, marketing, finance, and strategy.
- Practical decision-making using objectives, data, stakeholders, constraints, and risk.
- Business calculations including capacity utilization, productivity, cash flow, contribution, and break-even.
- Exam and case-study technique through examples, guided practice, review tests, and answer keys.

Recommended Study Method

1. Read the learning objectives before the lesson.
2. Study the concept table and explain each example in your own words.
3. Complete guided practice without checking the answer key.
4. For case questions, use evidence from the case and explain cause-and-effect.
5. Review difficult lessons after 24 hours and again after one week.

Management Case Checklist

- Objective: What result is the organization trying to achieve?
- Evidence: What facts, figures, and stakeholder information are available?
- Options: What realistic alternatives exist?
- Evaluation: What are the benefits, costs, risks, and limitations?
- Recommendation: What should be done, by whom, and how will success be measured?

Suggested 6-Week Study Schedule

- Week 1: Lessons 1-5 - management foundations and structure.
- Week 2: Lessons 6-10 - leadership, motivation, communication, and recruitment.
- Week 3: Lessons 11-15 - training, operations, quality, inventory, and supply.
- Week 4: Lessons 16-20 - marketing and sources of finance.
- Week 5: Lessons 21-25 - budgets, accounting, costing, entrepreneurship, and ethics.
- Week 6: Lessons 26-30 + revision tests and integrated case review.

REFERENCE

Table of Contents

Lessons 1-15

Lesson	Topic	Pages
1	Introduction to Management	5-6
2	Business Organizations and Objectives	7-8
3	Functions of Management	9-10
4	Planning and Decision-Making	11-12
5	Organizational Structure	13-14
6	Leadership	15-16
7	Motivation at Work	17-18
8	Communication in Organizations	19-20
9	Human Resource Management	21-22
10	Recruitment and Selection	23-24
11	Training and Performance Management	25-26
12	Operations Management	27-28
13	Production Methods and Capacity	29-30
14	Quality Management	31-32
15	Inventory and Supply Chain Management	33-34

Learning Map

- Foundations: management purpose, organization, planning, and structure.
- People: leadership, motivation, communication, recruitment, and development.
- Operations & Marketing: processes, quality, supply, customers, and market decisions.
- Finance & Strategy: budgeting, accounting, finance, entrepreneurship, ethics, risk, and implementation.

Study Notes

Write the lessons you need to review and the rule, formula, or management principle you want to remember.

REFERENCE

Table of Contents

Lessons 16-30, Revision and Reference

Lesson	Topic	Pages
16	Marketing Management	35-36
17	Market Research	37-38
18	Marketing Mix	39-40
19	Financial Management	41-42
20	Sources of Finance	43-44
21	Budgeting and Cash Flow	45-46
22	Accounting Basics	47-48
23	Costing and Break-Even Analysis	49-50
24	Entrepreneurship and Innovation	51-52
25	Business Ethics and Corporate Social Responsibility	53-54
26	Strategic Management	55-56
27	Risk Management	57-58
28	Project Management	59-60
29	Digital Management and Information Systems	61-62
30	Business Plan and Integrated Management Review	63-64
Revision	Comprehensive Review Tests	65-72
Answers	Answer Key	73-78
Reference	Management Quick Reference	79-80

Learning Map

- Foundations: management purpose, organization, planning, and structure.
- People: leadership, motivation, communication, recruitment, and development.
- Operations & Marketing: processes, quality, supply, customers, and market decisions.
- Finance & Strategy: budgeting, accounting, finance, entrepreneurship, ethics, risk, and implementation.

Study Notes

Write the lessons you need to review and the rule, formula, or management principle you want to remember.

LESSON 01 - CORE MANAGEMENT

Introduction to Management

Purpose, roles, and the manager's contribution to organizational performance.

Learning Objectives

- Define management and explain why organizations need it.
- Identify managerial levels and basic roles.
- Distinguish efficiency from effectiveness.

Concept	Explanation	Example
Management	Coordinating people and resources to achieve objectives.	A school manager plans staffing and resources.
Efficiency	Using resources with minimum waste or cost.	Producing the same output with less time.
Effectiveness	Achieving the intended objectives.	Meeting the service target on time.
Managerial levels	Top, middle, and first-line managers have different scopes.	Directors set strategy; supervisors manage daily work.

Key Principles

- Management balances people, money, information, time, and physical resources.
- Efficiency asks "Are we using resources well?"; effectiveness asks "Are we achieving the right results?"
- Managers are accountable for both decisions and outcomes.

Study Tip

When reading a case, first identify the organization's objective and the resources that are constrained.

Extra Model Examples

1. A manager reduces waiting time without lowering service quality.
2. A supervisor allocates tasks according to staff skills.
3. A director sets a three-year growth objective.
4. A team leader reviews results against targets.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 01 - PRACTICE

Introduction to Management

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"Management means only giving orders."	Management coordinates resources and people toward objectives.	The role includes planning, organizing, leading, and controlling.
"A manager can be efficient even if objectives are never achieved."	Efficiency and effectiveness must both be considered.	Low resource use is not enough if desired results are missed.

Guided Practice

1. Define management in one sentence.	2. Give one example of efficiency.
3. Give one example of effectiveness.	4. Name three management levels.
5. Explain why an efficient action may still be ineffective.	6. Identify one resource a manager must coordinate.
7. Apply management to a school office.	8. Explain one manager accountability.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Coordinating resources and people to achieve objectives.
2. Same output with less time/cost/waste.
3. Achieving the intended target.
4. Top, middle, first-line.
5. Efficiency can save resources while still missing the goal.
6. People, money, time, information, or equipment.
7. Plan workload, assign tasks, support staff, review service results.
8. Managers are accountable for decisions and results.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 02 - CORE MANAGEMENT

Business Organizations and Objectives

Types of organizations, stakeholders, mission, vision, and measurable objectives.

Learning Objectives

- Compare private, public, and nonprofit organizations.
- Identify major stakeholder groups.
- Write SMART objectives.

Concept	Explanation	Example
Private business	Owned by individuals or investors and usually seeks profit.	A retail company sells goods for profit.
Public organization	Owned or controlled by government to provide public services.	A municipal water service.
Nonprofit/NGO	Pursues a social mission rather than distributing profit.	A conservation NGO.
SMART objective	Specific, measurable, achievable, relevant, and time-bound.	Increase monthly sales by 8% within six months.

Key Principles

- Organizations may pursue several objectives at the same time.
- Stakeholder objectives can conflict, so managers must make trade-offs.
- Mission explains purpose; vision describes a desired future position.

Study Tip

Convert vague goals such as “improve service” into measurable targets with a deadline.

Extra Model Examples

1. Customers want value; employees want fair conditions.
2. Investors may prioritize return and long-term growth.
3. An NGO can measure impact without pursuing profit.
4. A SMART target improves accountability.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 02 - PRACTICE

Business Organizations and Objectives

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Classify a state hospital: public, private, or nonprofit.	2. Name two stakeholders of a retail business.
3. Rewrite "increase sales" as a SMART objective.	4. Distinguish mission from vision.
5. Give one stakeholder conflict.	6. Explain one objective of an NGO.
7. Identify one financial objective and one nonfinancial objective.	8. Write a six-month service objective.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Public.
2. Customers and employees (others possible).
3. Example: increase monthly sales by 8% within six months.
4. Mission = present purpose; vision = desired future.
5. Higher wages vs lower costs, for example.
6. Social or mission impact.
7. Profit target and service-quality target.
8. Example answers vary if specific, measurable, and time-bound.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 03 - CORE MANAGEMENT

Functions of Management

Planning, organizing, leading, and controlling as an integrated management cycle.

Learning Objectives

- Explain the four core management functions.
- Show how the functions connect.
- Apply the cycle to a practical case.

Concept	Explanation	Example
Planning	Setting objectives and deciding how to achieve them.	Prepare a quarterly work plan.
Organizing	Arranging tasks, people, authority, and resources.	Create teams and assign responsibilities.
Leading	Influencing and supporting people to perform.	Motivate staff during a difficult project.
Controlling	Comparing actual results with standards and correcting deviations.	Review budget variance and adjust spending.

Key Principles

- The four functions operate continuously rather than as isolated steps.
- Control information feeds back into the next planning cycle.
- Managers at every level perform all four functions, but with different emphasis.

Study Tip

For any management scenario, ask which function is currently weak and how strengthening it would affect results.

Extra Model Examples

1. Plan a training event, assign roles, lead the team, then review results.
2. A budget is both a planning and control tool.
3. Good organizing reduces duplication of work.
4. Corrective action is part of control.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 03 - PRACTICE

Functions of Management

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"Planning is finished once the plan is written."	Planning is reviewed as conditions and results change.	Management is a continuous cycle.
"Control means punishing employees."	Control compares results with standards and supports corrective action.	Its purpose is performance improvement and accountability.

Guided Practice

1. Name the four core functions.	2. Which function assigns responsibilities?
3. Which function compares results with standards?	4. Give one planning example.
5. Explain how control feeds future planning.	6. Apply POLC to a school event.
7. Give one leadership action.	8. Identify the weak function in a missed-deadline case.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Planning, organizing, leading, controlling.
2. Organizing.
3. Controlling.
4. Set objectives and actions before a project.
5. Results reveal what to adjust in the next plan.
6. Plan event, assign roles, lead delivery, review results.
7. Motivate, guide, communicate, or resolve problems.
8. Depends on case evidence.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 04 - CORE MANAGEMENT

Planning and Decision-Making

From objectives and forecasts to rational decisions under uncertainty.

Learning Objectives

- Distinguish strategic, tactical, and operational planning.
- Use a structured decision process.
- Recognize risk, uncertainty, and decision bias.

Concept	Explanation	Example
Strategic planning	Long-term direction for the whole organization.	Enter a new regional market.
Tactical planning	Medium-term plans translating strategy into departmental action.	Marketing plan for the next year.
Operational planning	Detailed short-term activities.	Weekly staff schedule.
Decision criteria	Standards used to compare alternatives.	Cost, time, risk, impact, and feasibility.

Key Principles

- Good decisions begin with a clearly defined problem, not a preferred solution.
- Quantitative data supports decisions but does not replace judgment.
- Contingency plans prepare the organization for important uncertainties.

Study Tip

Write the problem in one sentence before listing alternatives; this prevents solving the wrong problem.

Extra Model Examples

1. Compare suppliers using cost, quality, and delivery reliability.
2. Use a forecast to plan staffing levels.
3. Prepare Plan B for equipment failure.
4. Avoid choosing an option only because it is familiar.

Management Analysis Routine

Step 1: Identify the management problem, objective, or decision.

Step 2: Select the relevant concept, data, and stakeholders.

Step 3: Compare alternatives using benefits, costs, risks, and constraints.

Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 04 - PRACTICE

Planning and Decision-Making

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Distinguish strategic and operational planning.	2. List four decision criteria.
3. Define contingency plan.	4. Give one example of uncertainty.
5. Why should a problem be defined before choosing a solution?	6. Choose between two suppliers using three criteria.
7. Give one example of decision bias.	8. Write one tactical plan.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Strategic = long-term whole-organization; operational = short-term detailed.
2. Cost, time, risk, impact/quality/feasibility.
3. Prepared alternative action for uncertainty.
4. Demand, price, delay, or supplier uncertainty.
5. To avoid solving the wrong problem.
6. Answers vary if criteria are explicit.
7. Anchoring, overconfidence, familiarity bias, etc.
8. Departmental medium-term plan.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 05 - CORE MANAGEMENT

Organizational Structure

Authority, responsibility, span of control, centralization, and departmentalization.

Learning Objectives

- Interpret basic organization charts.
- Compare functional, divisional, and matrix structures.
- Explain delegation and span of control.

Concept	Explanation	Example
Functional structure	Groups employees by specialist function.	Finance, HR, marketing, operations.
Divisional structure	Groups work by product, region, or customer.	North region and South region divisions.
Matrix structure	Employees report across both functional and project lines.	Engineer reports to technical and project managers.
Delegation	Transfer of authority for a task while accountability remains with the manager.	Supervisor authorizes a team member to order supplies.

Key Principles

- Structure should support strategy and workflow.
- A wider span of control gives one manager more direct reports.
- Centralization keeps decisions at higher levels; decentralization pushes authority downward.

Study Tip

In case questions, connect structure to communication speed, expertise, accountability, and flexibility.

Extra Model Examples

1. A startup may use a flat structure.
2. A large diversified firm may use divisions.
3. Delegation can develop staff skills.
4. Clear reporting lines reduce confusion.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 05 - PRACTICE

Organizational Structure

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. What is delegation?	2. Name three common structures.
3. Explain span of control.	4. Give one benefit of decentralization.
5. Give one risk of matrix reporting.	6. Which structure groups work by function?
7. Draw a simple three-level structure in words.	8. Explain why structure should follow strategy.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Transfer authority for a task while manager retains accountability.
2. Functional, divisional, matrix.
3. Number of direct reports supervised by a manager.
4. Faster local decisions/greater empowerment.
5. Dual reporting can create conflict or ambiguity.
6. Functional.
7. Example: director > managers > supervisors/staff.
8. Structure should enable strategy and workflow.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 06 - CORE MANAGEMENT

Leadership

Leadership styles, power, situational choice, and team direction.

Learning Objectives

- Distinguish autocratic, democratic, and laissez-faire leadership.
- Identify sources of managerial power.
- Choose leadership styles for different situations.

Concept	Explanation	Example
Autocratic	Leader makes decisions with limited participation.	Useful in urgent safety situations.
Democratic	Leader involves employees in decisions.	Team discusses process improvement.
Laissez-faire	High employee autonomy with limited direct control.	Experienced creative team manages its methods.
Situational leadership	Style changes according to task, people, and context.	New staff need more direction than experts.

Key Principles

- No single leadership style is always best.
- Urgency, staff competence, risk, culture, and task complexity affect style choice.
- Trust grows when leaders are consistent, fair, and clear.

Study Tip

Avoid labeling one style as universally good or bad; evaluate its fit with the case conditions.

Extra Model Examples

1. A crisis may require rapid directive leadership.
2. Participation can improve commitment to change.
3. Expert teams may value autonomy.
4. Leaders should explain decisions that affect staff.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 06 - PRACTICE

Leadership

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice	
1. Define autocratic leadership.	2. Give one situation for democratic leadership.
3. Why might experts value autonomy?	4. Name two factors affecting style choice.
5. Explain situational leadership.	6. Give one source of managerial power.
7. How can a leader build trust?	8. Choose a style for an urgent safety incident.

Mastery Challenge
- Write two original business examples that demonstrate the main idea of this lesson. - Support your answer with one reason, example, calculation, or stakeholder effect where relevant. - Check your use of management vocabulary before comparing with the model answers.

Quick Answers
- Leader decides with limited participation. - When participation can improve information and commitment. - They may need less supervision and value autonomy. - Urgency, competence, risk, culture, task complexity. - Style adapts to people and situation. - Position, expertise, reward, information, etc. - Consistency, fairness, clarity, listening. - Autocratic/directive is often suitable for immediate safety.

Independent Practice
- Apply the lesson to a small school, shop, NGO, or service business. - Explain one advantage and one limitation of the main concept. - Create one deliberately weak management decision, then improve it. - Write a 60-80 word mini-case and propose a practical response.

Exam Strategy
- Define the concept before evaluating it. - Use case evidence rather than generic statements. - For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections
Record one mistake, the correction, and the management principle behind it.

LESSON 07 - CORE MANAGEMENT

Motivation at Work

Needs, incentives, job design, recognition, and employee engagement.

Learning Objectives

- Explain financial and nonfinancial motivation.
- Apply selected motivation theories carefully.
- Recommend practical methods to improve engagement.

Concept	Explanation	Example
Financial rewards	Pay, bonuses, commissions, and benefits.	Sales commission linked to results.
Nonfinancial rewards	Recognition, autonomy, development, and meaningful work.	Employee receives responsibility for a project.
Intrinsic motivation	Motivation arising from interest or satisfaction in the work itself.	A teacher values student progress.
Extrinsic motivation	Motivation driven by external rewards or consequences.	Bonus for meeting a target.

Key Principles

- Different employees value different rewards.
- Fairness and clear performance criteria influence whether rewards motivate.
- Job enrichment can increase responsibility, variety, and meaning.

Study Tip

When recommending a motivator, explain why it fits the employee need and how performance would improve.

Extra Model Examples

1. Recognition can be powerful even when low-cost.
2. Training can support both motivation and capability.
3. Unrealistic targets may reduce motivation.
4. Team incentives can encourage cooperation.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 07 - PRACTICE

Motivation at Work

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Give two financial motivators.	2. Give two nonfinancial motivators.
3. Distinguish intrinsic and extrinsic motivation.	4. Why can unrealistic targets demotivate?
5. Give one job-enrichment method.	6. Why does fairness matter in reward systems?
7. Recommend motivation for a skilled employee seeking growth.	8. Explain one risk of individual bonuses.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Pay, bonus, commission, benefits.
2. Recognition, autonomy, development, meaningful work.
3. Intrinsic comes from the work itself; extrinsic from external reward/consequence.
4. They can feel unattainable and reduce effort.
5. More responsibility, variety, autonomy, or whole tasks.
6. Perceived unfairness reduces trust and motivation.
7. Development opportunity, meaningful responsibility, recognition.
8. Can encourage unhealthy competition or narrow focus.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 08 - CORE MANAGEMENT

Communication in Organizations

Channels, feedback, barriers, meetings, reports, and digital communication.

Learning Objectives

- Explain the communication process.
- Compare formal and informal channels.
- Reduce common communication barriers.

Concept	Explanation	Example
Sender-message-receiver	A sender encodes a message, uses a channel, and receives feedback.	Manager emails a deadline and confirms understanding.
Formal communication	Official communication following organizational channels.	Policy memo or approved report.
Informal communication	Unofficial exchanges outside formal channels.	Colleagues share practical advice.
Feedback	Response that shows whether the message was understood.	Employee repeats key instructions.

Key Principles

- Communication is successful only when meaning is understood, not merely transmitted.
- Channel choice should match urgency, complexity, confidentiality, and audience.
- Feedback and active listening reduce misunderstanding.

Study Tip

For each message, identify the audience, purpose, best channel, and the feedback needed.

Extra Model Examples

1. Use a meeting for complex discussion.
2. Use a written record for formal decisions.
3. Avoid technical jargon with a nontechnical audience.
4. Summarize actions, owners, and deadlines.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 08 - PRACTICE

Communication in Organizations

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Name the main elements of the communication process.	2. Give one formal channel.
3. Give one informal channel.	4. Why is feedback important?
5. Choose a channel for a confidential policy change.	6. Name one communication barrier.
7. Rewrite a complex message for a nontechnical audience.	8. List three items that should end a meeting note.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Sender, message, channel, receiver, feedback (with encoding/decoding).
2. Policy memo/report.
3. Informal colleague discussion.
4. Confirms understanding and enables correction.
5. Secure written communication plus briefing if complex.
6. Noise, jargon, assumptions, language, information overload.
7. Use plain language and relevant examples.
8. Actions, owners, deadlines.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 09 - CORE MANAGEMENT

Human Resource Management

Workforce planning, employee relations, records, policies, and HR strategy.

Learning Objectives

- Explain the purpose of HR management.
- Link workforce planning to organizational needs.
- Identify key HR responsibilities.

Concept	Explanation	Example
Workforce planning	Forecasting the number and skills of employees needed.	Plan recruitment for a new branch.
HR policy	A formal rule or guideline for employment decisions.	Leave and attendance policy.
Employee relations	Managing the relationship between employees and the organization.	Resolve workplace grievances.
HR metrics	Measures used to monitor workforce outcomes.	Turnover, absenteeism, training completion.

Key Principles

- HR decisions should support business strategy and legal/ethical standards.
- Workforce data helps managers identify capacity and skill gaps.
- Consistent policies improve fairness and predictability.

Study Tip

Link every HR recommendation to a workforce need such as skills, retention, productivity, or compliance.

Extra Model Examples

1. Track turnover by department.
2. Update job descriptions when roles change.
3. Use exit interviews to identify recurring issues.
4. Maintain accurate personnel records.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 09 - PRACTICE

Human Resource Management

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Define workforce planning.	2. Name three HR responsibilities.
3. Give one HR metric.	4. Why are consistent policies important?
5. What can exit interviews reveal?	6. Give one example of an HR policy.
7. How can HR support strategy?	8. Name one reason turnover may rise.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Forecasting workforce numbers and skills needed.
2. Recruitment, training, employee relations, records/policies, performance.
3. Turnover or absenteeism.
4. They support fairness and predictable decisions.
5. Reasons employees leave and recurring problems.
6. Leave, attendance, conduct, recruitment, etc.
7. Ensure skills and staffing match strategic needs.
8. Poor management, pay, workload, limited growth, etc.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 10 - CORE MANAGEMENT

Recruitment and Selection

Job analysis, recruitment channels, screening, interviews, and fair selection.

Learning Objectives

- Prepare basic job descriptions and person specifications.
- Compare internal and external recruitment.
- Design a fair selection process.

Concept	Explanation	Example
Job description	Lists duties, responsibilities, and reporting relationships.	Accounts assistant prepares vouchers and reconciliations.
Person specification	Lists skills, qualifications, and attributes needed.	Excel skills and attention to detail.
Internal recruitment	Fills a vacancy from existing employees.	Promote an assistant to supervisor.
External recruitment	Attracts candidates from outside the organization.	Advertise a vacancy publicly.

Key Principles

- Selection criteria should be linked to job requirements.
- Structured interviews improve consistency.
- Recruitment quality affects future performance, turnover, and training needs.

Study Tip

Separate essential criteria from desirable criteria before reviewing applications.

Extra Model Examples

1. Shortlist using predefined criteria.
2. Ask the same core questions to all candidates.
3. Reference checks verify selected information.
4. Document decisions for transparency.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 10 - PRACTICE

Recruitment and Selection

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Distinguish job description and person specification.	2. Give one benefit of internal recruitment.
3. Give one benefit of external recruitment.	4. Why use structured interviews?
5. Write one essential criterion for an accountant.	6. What is shortlisting?
7. Why document selection decisions?	8. Name one selection method besides interview.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Description = duties; specification = required person criteria.
2. Lower cost/faster/known employee/career path.
3. Wider talent pool/new ideas.
4. Consistency and fair comparison.
5. Relevant accounting knowledge and accuracy, for example.
6. Selecting candidates who meet criteria for the next stage.
7. Transparency and defensibility.
8. Test, work sample, assessment center, reference check.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 11 - CORE MANAGEMENT

Training and Performance Management

Learning needs, training methods, appraisal, feedback, and improvement plans.

Learning Objectives

- Identify training needs.
- Compare on-the-job and off-the-job training.
- Use performance objectives and feedback constructively.

Concept	Explanation	Example
Training needs analysis	Identifies gaps between required and current competence.	Staff need spreadsheet skills for a new system.
On-the-job training	Learning while performing work.	Coaching by an experienced colleague.
Off-the-job training	Learning away from normal work duties.	External workshop or course.
Performance appraisal	Structured review of results, behavior, and development.	Quarterly performance discussion.

Key Principles

- Training should address a verified need and be evaluated afterward.
- Performance measures should be relevant and controllable by the employee.
- Feedback is most useful when specific, timely, and focused on improvement.

Study Tip

Distinguish a skill gap from a motivation, resource, or process problem before prescribing training.

Extra Model Examples

1. Use a post-training task to test application.
2. Set clear objectives before the appraisal period.
3. Agree an improvement plan for performance gaps.
4. Recognize strong performance as well as problems.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 11 - PRACTICE

Training and Performance Management

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. What is a training needs analysis?	2. Give one on-the-job method.
3. Give one off-the-job method.	4. Why should training be evaluated?
5. Write one measurable performance objective.	6. Give one characteristic of useful feedback.
7. Why may training fail to solve a motivation problem?	8. Suggest one post-training evaluation method.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Process for identifying competence gaps.
2. Coaching, mentoring, job rotation, demonstration.
3. Course, workshop, external training.
4. To check learning and business impact.
5. Example: reduce data-entry errors to below 2% by quarter end.
6. Specific and timely.
7. Training does not fix unwillingness or missing resources.
8. Test, observation, KPI change, practical task.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 12 - CORE MANAGEMENT

Operations Management

Transforming inputs into outputs efficiently while meeting customer requirements.

Learning Objectives

- Explain the input-transformation-output model.
- Identify operations objectives.
- Recognize bottlenecks and capacity constraints.

Concept	Explanation	Example
Inputs	Resources entering a process.	Materials, labor, information, equipment.
Transformation	Activities that convert inputs into outputs.	Assembly, transport, teaching, data processing.
Outputs	Goods or services delivered to customers.	Finished product or completed service.
Operations objectives	Cost, quality, speed, dependability, and flexibility.	Shorter delivery time with stable quality.

Key Principles

- Operations management applies to both manufacturing and services.
- Improving one objective can sometimes create trade-offs with another.
- Bottlenecks limit total process capacity.

Study Tip

Draw the process from input to output before proposing improvements.

Extra Model Examples

1. Map the steps in a customer service process.
2. Measure waiting time and error rates.
3. Increase capacity at the bottleneck first.
4. Standardize repetitive tasks where useful.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 12 - PRACTICE

Operations Management

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. List four inputs to an operation.	2. Define transformation process.
3. Name five operations objectives.	4. What is a bottleneck?
5. Why can cost and flexibility conflict?	6. Map a simple service process in three steps.
7. Give one quality measure.	8. Why improve the bottleneck first?

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Materials, people, equipment, information, facilities.
2. Activities converting inputs into outputs.
3. Cost, quality, speed, dependability, flexibility.
4. Step that limits total process output.
5. More flexibility can require extra capacity/cost.
6. Answers vary.
7. Error, return, complaint, or on-time rate.
8. Increasing non-bottleneck capacity may not raise total output.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 13 - CORE MANAGEMENT

Production Methods and Capacity

Job, batch, flow production, capacity utilization, and productivity.

Learning Objectives

- Compare job, batch, and flow production.
- Calculate capacity utilization and labor productivity.
- Match production method to demand characteristics.

Concept	Explanation	Example
Job production	One customized product or service at a time.	Custom furniture.
Batch production	Groups of identical items produced together.	Bakery produces batches of bread.
Flow production	Continuous standardized production.	Bottling line.
Capacity utilization	Actual output as a percentage of maximum practical capacity.	800 units from 1,000-unit capacity = 80%.

Key Principles

- Method choice depends on volume, variety, technology, cost, and customer needs.
- Very high utilization can reduce flexibility and increase delays.
- Productivity compares output with the inputs used.

Study Tip

Always interpret a calculated percentage: explain what it means for cost, flexibility, or service.

Extra Model Examples

1. Capacity utilization = actual output / maximum output x 100.
2. Labor productivity = output / labor input.
3. Batch production balances variety and efficiency.
4. Job production supports customization.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 13 - PRACTICE

Production Methods and Capacity

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"80% capacity utilization means 80 units are produced."	It means actual output is 80% of maximum practical output.	A percentage needs a capacity base.
"Higher utilization is always better."	Very high utilization may reduce flexibility and resilience.	Interpret the operational context.

Guided Practice

1. Identify job, batch, or flow: custom wedding cake.	2. Identify job, batch, or flow: bottled water line.
3. Calculate utilization: 750/1000.	4. Calculate productivity: 600 units/30 labor hours.
5. Give one risk of 100% utilization.	6. When is batch production useful?
7. Give one benefit of job production.	8. Interpret 75% capacity utilization.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Job.
2. Flow.
3. 75%.
4. 20 units per labor hour.
5. No buffer for breakdowns or demand variation.
6. Moderate volume with some variety.
7. High customization.
8. Actual output equals 75% of maximum practical capacity.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 14 - CORE MANAGEMENT

Quality Management

Quality standards, inspection, assurance, continuous improvement, and customer satisfaction.

Learning Objectives

- Distinguish quality control and quality assurance.
- Explain continuous improvement.
- Use basic quality indicators.

Concept	Explanation	Example
Quality control	Detects defects in outputs, often through inspection or testing.	Inspect finished products.
Quality assurance	Builds quality into processes and procedures.	Use documented process standards.
Continuous improvement	Ongoing small improvements to processes.	Teams reduce repeated errors each month.
Quality indicator	A measurable sign of quality performance.	Return rate, defect rate, complaint rate.

Key Principles

- Prevention is often less costly than correcting defects later.
- Quality should reflect customer requirements, not only internal specifications.
- Root-cause analysis focuses on why a problem occurs repeatedly.

Study Tip

Do not stop at the visible defect; identify the process cause and propose a preventive action.

Extra Model Examples

1. Track defect rate over time.
2. Use checklists for critical steps.
3. Investigate recurring complaints.
4. Train staff when procedures change.

Management Analysis Routine

Step 1: Identify the management problem, objective, or decision.

Step 2: Select the relevant concept, data, and stakeholders.

Step 3: Compare alternatives using benefits, costs, risks, and constraints.

Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 14 - PRACTICE

Quality Management

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Distinguish quality control and assurance.	2. Give one quality indicator.
3. What is continuous improvement?	4. Why is prevention valuable?
5. Give one possible root cause of repeated errors.	6. Write one preventive action.
7. How can customer complaints support quality management?	8. Give one process checklist example.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Control detects defects; assurance prevents them through process design.
2. Defect rate, return rate, complaint rate.
3. Ongoing small process improvements.
4. Prevention avoids rework, waste, and customer harm.
5. Poor training, unclear procedure, faulty equipment, etc.
6. Revise procedure, train, maintain, automate, verify.
7. Complaints reveal recurring failure points.
8. Safety/quality checklist before release.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 15 - CORE MANAGEMENT

Inventory and Supply Chain Management

Stock control, purchasing, suppliers, lead time, and supply risk.

Learning Objectives

- Explain why organizations hold inventory.
- Use reorder level concepts.
- Evaluate supplier performance and supply risk.

Concept	Explanation	Example
Inventory	Materials, work-in-progress, or finished goods held for use or sale.	Retail stock in a warehouse.
Reorder level	Stock level that triggers a replenishment order.	Reorder before safety stock is exhausted.
Lead time	Time between placing an order and receiving it.	Supplier delivers in seven days.
Supplier evaluation	Assessment of price, quality, delivery, service, and risk.	Score suppliers against agreed criteria.

Key Principles

- Too much stock ties up cash; too little stock risks lost sales or production stoppage.
- Long or uncertain lead times usually require more protection stock.
- Supplier decisions should consider total value, not only purchase price.

Study Tip

Connect stock decisions to cash flow, customer service, storage cost, and supply risk.

Extra Model Examples

1. Monitor stock movements.
2. Use safety stock for uncertainty.
3. Track on-time delivery percentage.
4. Develop alternatives for critical supplies.

Management Analysis Routine

Step 1: Identify the management problem, objective, or decision.

Step 2: Select the relevant concept, data, and stakeholders.

Step 3: Compare alternatives using benefits, costs, risks, and constraints.

Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 15 - PRACTICE

Inventory and Supply Chain Management

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice	
1. Why hold inventory?	2. Give one cost of too much stock.
3. Give one risk of too little stock.	4. Define lead time.
5. What is a reorder level?	6. Name four supplier criteria.
7. Why is purchase price not the only criterion?	8. Suggest one response to critical supplier risk.

Mastery Challenge
- Write two original business examples that demonstrate the main idea of this lesson. - Support your answer with one reason, example, calculation, or stakeholder effect where relevant. - Check your use of management vocabulary before comparing with the model answers.

Quick Answers
1. Meet demand, buffer uncertainty, support production. 2. Storage, obsolescence, tied-up cash. 3. Stockout, lost sales, stoppage. 4. Order-to-delivery time. 5. Stock point triggering replenishment. 6. Price, quality, delivery, service, risk. 7. Low price can be offset by poor quality or late delivery. 8. Backup supplier, safety stock, contract, monitoring.

Independent Practice
A. Apply the lesson to a small school, shop, NGO, or service business. B. Explain one advantage and one limitation of the main concept. C. Create one deliberately weak management decision, then improve it. D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy
- Define the concept before evaluating it. - Use case evidence rather than generic statements. - For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections
Record one mistake, the correction, and the management principle behind it.

LESSON 16 - CORE MANAGEMENT

Marketing Management

Customer value, segmentation, targeting, positioning, and marketing objectives.

Learning Objectives

- Define marketing from a customer-value perspective.
- Explain segmentation and targeting.
- Write measurable marketing objectives.

Concept	Explanation	Example
Marketing	Identifying and satisfying customer needs profitably or sustainably.	Design an offer for a defined target market.
Segmentation	Dividing a market into meaningful customer groups.	Segment by age, location, income, or behavior.
Targeting	Selecting segments the organization will serve.	Focus on university students.
Positioning	Creating a clear desired perception relative to alternatives.	Reliable service at an affordable price.

Key Principles

- Effective marketing starts with customer needs, not just promotion.
- Segments should be measurable, reachable, substantial, and useful for decision-making.
- Positioning should be supported by the actual product and service experience.

Study Tip

State exactly which customer group is being served before recommending marketing actions.

Extra Model Examples

1. Survey target customers.
2. Build a customer profile.
3. Choose channels used by the target market.
4. Track awareness, conversion, retention, or sales.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 16 - PRACTICE

Marketing Management

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Define market segmentation.	2. Give four segmentation bases.
3. What is targeting?	4. What is positioning?
5. Write one marketing objective.	6. Why should positioning match actual experience?
7. Describe one target customer profile.	8. Name one marketing performance indicator.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Dividing a market into customer groups.
2. Demographic, geographic, psychographic, behavioral.
3. Selecting segment(s) to serve.
4. Desired customer perception relative to alternatives.
5. Example answers vary if measurable and time-bound.
6. Customers judge the real experience, not only advertising.
7. Age/location/needs/behavior/budget profile.
8. Sales, awareness, conversion, retention, share.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 17 - CORE MANAGEMENT

Market Research

Primary and secondary data, sampling, questionnaires, interviews, and data interpretation.

Learning Objectives

- Distinguish primary and secondary research.
- Select appropriate research methods.
- Recognize sampling and question-design problems.

Concept	Explanation	Example
Primary research	New data collected for a specific purpose.	Customer survey conducted by the business.
Secondary research	Existing data collected previously by another source or purpose.	Industry report or government statistics.
Sample	A subset of the population studied.	Survey 150 customers from a larger customer base.
Questionnaire design	Writing neutral, clear, answerable questions.	Avoid leading or double questions.

Key Principles

- Research should answer a defined decision question.
- A large biased sample can still give misleading results.
- Combine quantitative and qualitative evidence when useful.

Study Tip

Before collecting data, write the exact management decision the research should support.

Extra Model Examples

1. Pilot-test a questionnaire.
2. Use open questions for explanations.
3. Use closed questions for easier comparison.
4. Check source date and credibility for secondary data.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 17 - PRACTICE

Market Research

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Distinguish primary and secondary research.	2. Give one qualitative method.
3. Give one quantitative method.	4. What is sampling bias?
5. Why pilot-test a questionnaire?	6. Rewrite one leading question neutrally.
7. Name one secondary data source.	8. Explain one benefit of mixed methods.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Primary = new specific data; secondary = existing data.
2. Interview or focus group.
3. Structured survey.
4. Sample systematically differs from target population.
5. To detect confusing or biased questions.
6. Answers vary.
7. Government data, industry report, company records.
8. Numbers show extent; qualitative data explains reasons.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 18 - CORE MANAGEMENT

Marketing Mix

Product, price, place, promotion, people, process, and physical evidence.

Learning Objectives

- Explain the 4Ps and extended 7Ps.
- Recommend a coherent marketing mix.
- Relate the mix to target customers and positioning.

Concept	Explanation	Example
Product	The good or service and its features, design, quality, and branding.	Durable phone with warranty.
Price	Amount charged and pricing approach.	Penetration price for a new market.
Place	Distribution channels and availability.	Online store plus local delivery.
Promotion	Communication used to inform and persuade.	Advertising, sales promotion, public relations.

Key Principles

- The marketing mix must be internally consistent.
- Services often require attention to people, process, and physical evidence.
- Price communicates value as well as generating revenue.

Study Tip

Avoid recommending a single P in isolation; explain how the elements reinforce each other.

Extra Model Examples

1. Premium positioning requires matching quality and service.
2. Distribution should be convenient for the target market.
3. Promotion should use the audience's media habits.
4. Measure campaign results, not only reach.

Management Analysis Routine

Step 1: Identify the management problem, objective, or decision.

Step 2: Select the relevant concept, data, and stakeholders.

Step 3: Compare alternatives using benefits, costs, risks, and constraints.

Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 18 - PRACTICE

Marketing Mix

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Name the 4Ps.	2. Name the three additional service Ps.
3. Give one pricing approach.	4. Choose a place decision for an online target market.
5. Give one promotion method.	6. Explain why the mix must be coherent.
7. Give one physical-evidence example for a service.	8. How would you measure a promotion result?

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Product, price, place, promotion.
2. People, process, physical evidence.
3. Penetration, skimming, competitive, cost-plus, value-based, etc.
4. Digital distribution/home delivery, for example.
5. Advertising, PR, sales promotion, direct/digital marketing.
6. Mixed messages weaken positioning and customer experience.
7. Store/website appearance, signage, uniform, documents.
8. Conversion, sales lift, response rate, ROI, acquisition cost.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 19 - CORE MANAGEMENT

Financial Management

Financial objectives, liquidity, profitability, working capital, and financial decision-making.

Learning Objectives

- Explain the role of financial management.
- Distinguish profit from cash.
- Identify basic financial objectives and constraints.

Concept	Explanation	Example
Profitability	Ability to generate profit relative to sales or resources.	Improve margin by managing price and cost.
Liquidity	Ability to meet short-term obligations when due.	Maintain enough cash to pay suppliers.
Working capital	Current assets minus current liabilities.	Stock and receivables financed against short-term obligations.
Financial control	Monitoring results against budgets and targets.	Review monthly spending variance.

Key Principles

- A profitable organization can still face a cash shortage.
- Financial decisions should balance return, liquidity, risk, and long-term sustainability.
- Reliable records are essential for financial control.

Study Tip

In finance questions, distinguish the income effect from the cash-flow effect.

Extra Model Examples

1. Prepare cash forecasts.
2. Monitor overdue customer balances.
3. Review cost trends.
4. Compare actual spending with budget.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 19 - PRACTICE

Financial Management

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Define liquidity.	2. Define profitability.
3. What is working capital?	4. Why can a profitable firm run out of cash?
5. Give one financial control.	6. Name one liquidity risk.
7. Explain one trade-off between return and risk.	8. Name one finance record a manager should review monthly.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Ability to meet short-term obligations.
2. Ability to generate profit relative to activity/resources.
3. Current assets minus current liabilities.
4. Revenue/profit may be recorded before cash is received.
5. Budget review, bank reconciliation, receivables aging, cost variance.
6. Late customer receipts, excessive stock, sudden bills.
7. Higher return may require higher risk or lower liquidity.
8. Cash forecast/budget/receivables/payables.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 20 - CORE MANAGEMENT

Sources of Finance

Internal and external finance, short-term and long-term needs, cost and risk.

Learning Objectives

- Identify common sources of business finance.
- Match finance duration to the purpose.
- Evaluate cost, control, risk, and repayment implications.

Concept	Explanation	Example
Retained profit	Profit kept in the business for reinvestment.	Fund equipment from accumulated earnings.
Bank loan	Borrowed amount repaid with interest over time.	Finance a vehicle over three years.
Trade credit	Supplier allows payment after delivery.	Pay invoice in 30 days.
Equity	Funds provided by owners or investors in exchange for ownership.	New investor contributes capital.

Key Principles

- Short-term finance should not normally fund long-lived assets indefinitely.
- Cheap finance may carry other costs such as loss of control or restrictive conditions.
- Borrowing increases fixed repayment obligations.

Study Tip

Match the financing source to amount, duration, risk, cash-flow pattern, and ownership preferences.

Extra Model Examples

1. Use overdraft for temporary working-capital fluctuations.
2. Use longer-term finance for major equipment.
3. Compare total finance cost.
4. Assess repayment capacity under weaker sales.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 20 - PRACTICE

Sources of Finance

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Give one internal source of finance.	2. Give three external sources.
3. Which source suits a temporary cash shortage?	4. Why match finance term to asset life?
5. Give one risk of debt.	6. Give one implication of equity finance.
7. What is trade credit?	8. List four criteria for choosing finance.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Retained profit.
2. Loan, overdraft, trade credit, equity, leasing, etc.
3. Overdraft or other suitable short-term finance.
4. Repayment should align with the life and cash generation of the asset.
5. Interest and mandatory repayments/default risk.
6. Ownership dilution/control sharing; no fixed repayment in the same way.
7. Delayed payment to suppliers.
8. Amount, term, cost, risk, control, cash-flow pattern.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 21 - CORE MANAGEMENT

Budgeting and Cash Flow

Budgets, cash-flow forecasts, variance analysis, and corrective action.

Learning Objectives

- Prepare a simple cash-flow forecast.
- Calculate and interpret budget variances.
- Explain how budgets support planning and control.

Concept	Explanation	Example
Budget	A quantified plan for a future period.	Monthly operating expense budget.
Cash inflow	Money expected to enter the organization.	Customer receipts or grant disbursement.
Cash outflow	Money expected to leave the organization.	Wages, rent, supplies.
Variance	Difference between actual and budgeted amount.	Actual cost exceeds budget by 5%.

Key Principles

- Cash-flow forecasts focus on timing of cash receipts and payments.
- A favorable or unfavorable variance depends on the type of item and context.
- Variance analysis should lead to investigation, not automatic blame.

Study Tip

For every variance, ask whether it is caused by price, volume, timing, efficiency, or an inaccurate assumption.

Extra Model Examples

1. Closing cash = opening cash + inflows - outflows.
2. Update forecasts when assumptions change.
3. Investigate large recurring variances.
4. Keep contingency reserves where appropriate.

Management Analysis Routine

Step 1: Identify the management problem, objective, or decision.

Step 2: Select the relevant concept, data, and stakeholders.

Step 3: Compare alternatives using benefits, costs, risks, and constraints.

Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 21 - PRACTICE

Budgeting and Cash Flow

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"Profit guarantees positive cash every month."	Profit and cash timing are different.	Credit sales and payment timing affect cash flow.
"Any overspending variance is caused by poor control."	Investigate price, volume, timing, efficiency, and assumption changes.	Variance is a signal, not proof of cause.

Guided Practice

1. Define cash inflow.	2. Define cash outflow.
3. Calculate closing cash: $5,000 + 8,000 - 10,500$.	4. Define variance.
5. Give one reason for an expense variance.	6. Why update a cash forecast?
7. What is the purpose of contingency cash?	8. Interpret a repeated unfavorable cost variance.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Cash entering the organization.
2. Cash leaving the organization.
3. 2,500.
4. Actual minus budgeted amount.
5. Price increase, volume change, timing, inefficiency, wrong assumption.
6. Conditions and timing change.
7. To absorb unexpected outflows or delays.
8. Investigate cause and adjust budget/process/action.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 22 - CORE MANAGEMENT

Accounting Basics

Transactions, assets, liabilities, equity, income, expenses, and financial statements.

Learning Objectives

- Explain the accounting equation.
- Classify common financial statement items.
- Distinguish income statement and statement of financial position.

Concept	Explanation	Example
Assets	Resources controlled by the organization with economic value.	Cash, equipment, receivables.
Liabilities	Obligations owed to others.	Loan payable or supplier balance.
Equity	Owners' residual interest after liabilities.	Capital plus retained earnings.
Accounting equation	Assets = Liabilities + Equity.	20,000 assets = 8,000 liabilities + 12,000 equity.

Key Principles

- Every transaction affects the accounting records in a balanced way.
- Income and expenses measure performance over a period; assets and liabilities describe position at a date.
- Accounting profit is not the same as cash balance.

Study Tip

Classify each item first; then decide which statement and which side of the accounting equation it affects.

Extra Model Examples

1. Buying equipment for cash changes asset composition.
2. A credit purchase increases inventory and payables.
3. Revenue increases equity through profit.
4. Expenses reduce profit and equity.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 22 - PRACTICE

Accounting Basics

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. State the accounting equation.	2. Classify cash: asset, liability, or equity.
3. Classify bank loan.	4. Classify owner capital.
5. What happens when equipment is bought for cash?	6. Distinguish income statement and statement of financial position.
7. Why is accounting profit different from cash?	8. Give one example of a liability.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

- Assets = Liabilities + Equity.
- Asset.
- Liability.
- Equity.
- Cash decreases and equipment increases; total assets may be unchanged.
- Income statement = performance over period; position statement = assets/liabilities/equity at a date.
- Accrual timing and noncash items differ from cash movements.
- Loan payable or supplier payable.

Independent Practice

- Apply the lesson to a small school, shop, NGO, or service business.
- Explain one advantage and one limitation of the main concept.
- Create one deliberately weak management decision, then improve it.
- Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 23 - CORE MANAGEMENT

Costing and Break-Even Analysis

Fixed costs, variable costs, contribution, break-even output, and margin of safety.

Learning Objectives

- Classify fixed and variable costs.
- Calculate contribution and break-even output.
- Interpret margin of safety and limitations.

Concept	Explanation	Example
Fixed cost	Cost that does not change directly with output in the relevant range.	Monthly rent.
Variable cost	Cost that changes with units produced or sold.	Material cost per unit.
Contribution	Selling price per unit minus variable cost per unit.	Price 20 - variable cost 12 = contribution 8.
Break-even output	Fixed costs divided by contribution per unit.	Fixed cost 4,000 / contribution 8 = 500 units.

Key Principles

- Break-even analysis simplifies reality and assumes stable price, cost, and sales mix.
- Contribution first covers fixed cost; after break-even it contributes to profit.
- Margin of safety measures how far actual sales exceed break-even sales.

Study Tip

Show the formula and interpret the result in words, not only as a number.

Extra Model Examples

1. Total cost = fixed cost + total variable cost.
2. Profit = total contribution - fixed cost.
3. Break-even supports pricing and volume decisions.
4. Sensitivity analysis tests changed assumptions.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 23 - PRACTICE

Costing and Break-Even Analysis

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"Fixed costs never change."	Fixed costs are fixed only within a relevant range and period.	They can change after a capacity step or contract change.
"Break-even guarantees success."	Break-even is a simplified decision model.	Demand, cash timing, uncertainty, and other constraints still matter.

Guided Practice

1. Classify rent as fixed or variable in a short-run example.	2. Calculate contribution: price 30, variable cost 18.
3. Calculate break-even: fixed cost 6,000, contribution 12.	4. Calculate profit at 700 units using the same data.
5. Define margin of safety.	6. Give one limitation of break-even analysis.
7. What happens to break-even if fixed cost rises?	8. What happens to break-even if contribution rises?

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Fixed in the short-run example.
2. 12.
3. 500 units.
4. 2,400 profit: $700 \times 12 - 6,000$.
5. Actual/budgeted sales above break-even sales.
6. Assumes stable costs, price, volume relationships/sales mix.
7. Break-even rises.
8. Break-even falls.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 24 - CORE MANAGEMENT

Entrepreneurship and Innovation

Opportunity recognition, value proposition, business models, and entrepreneurial risk.

Learning Objectives

- Identify entrepreneurial opportunities.
- Explain a value proposition and business model.
- Evaluate feasibility before launch.

Concept	Explanation	Example
Opportunity	A customer problem or unmet need that can support a viable solution.	Affordable delivery service in an underserved area.
Value proposition	Clear reason customers should choose the offer.	Faster same-day delivery with tracking.
Business model	How the organization creates, delivers, and captures value.	Subscription, transaction fee, or direct sales.
Minimum viable product	Simple early version used to test key assumptions.	Pilot service with 20 customers.

Key Principles

- Ideas become opportunities only when customers value them and the model is feasible.
- Entrepreneurs should test critical assumptions before making large commitments.
- Innovation can involve products, services, processes, or business models.

Study Tip

Identify the riskiest assumption in the idea and design the cheapest credible test for it.

Extra Model Examples

1. Interview potential users.

2. Test price willingness.

3. Pilot operations at small scale.

4. Track repeat usage, not only initial interest.

Management Analysis Routine

Step 1: Identify the management problem, objective, or decision.

Step 2: Select the relevant concept, data, and stakeholders.

Step 3: Compare alternatives using benefits, costs, risks, and constraints.

Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 24 - PRACTICE

Entrepreneurship and Innovation

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Define value proposition.	2. Give one example of an opportunity.
3. What is a business model?	4. Why use a minimum viable product?
5. Name one assumption to test before launch.	6. Give one customer-validation method.
7. How can innovation occur without a new product?	8. Explain one entrepreneurial risk.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Reason customers should choose the offer.
2. A valued unmet need with feasible solution.
3. How value is created, delivered, and captured.
4. To test important assumptions cheaply and early.
5. Demand, price, cost, channel, operation, retention, etc.
6. Interview, preorder, pilot, landing-page test.
7. Process or business-model innovation.
8. Demand, finance, operational, competitive, regulatory risk.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 25 - CORE MANAGEMENT

Business Ethics and Corporate Social Responsibility

Ethical choices, stakeholder responsibility, sustainability, and governance.

Learning Objectives

- Distinguish legal compliance from ethical responsibility.
- Identify stakeholder effects of business decisions.
- Explain CSR and sustainable management.

Concept	Explanation	Example
Ethics	Principles used to judge right and responsible conduct.	Rejecting a misleading sales claim.
CSR	Organizational responsibility for social and environmental impacts.	Reduce waste and improve worker safety.
Governance	Systems for direction, oversight, accountability, and control.	Board oversight and clear approval rules.
Conflict of interest	Personal interest may improperly influence a professional decision.	Buyer has a financial interest in a supplier.

Key Principles

- Legal behavior is not automatically ethical in every situation.
- Ethical decisions consider transparency, fairness, harm, rights, and long-term trust.
- Good governance reduces misuse of authority and resources.

Study Tip

For ethical cases, identify affected stakeholders, possible harm, relevant duties, and transparent alternatives.

Extra Model Examples

1. Disclose conflicts of interest.
2. Protect confidential information.
3. Avoid false environmental claims.
4. Use transparent procurement criteria.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 25 - PRACTICE

Business Ethics and Corporate Social Responsibility

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice	
1. Distinguish law and ethics.	2. Give one CSR activity.
3. Define conflict of interest.	4. Give one governance control.
5. Why disclose conflicts?	6. Name two stakeholders in an ethical decision.
7. Give one example of misleading communication.	8. Explain one long-term benefit of ethical conduct.

Mastery Challenge
- Write two original business examples that demonstrate the main idea of this lesson. - Support your answer with one reason, example, calculation, or stakeholder effect where relevant. - Check your use of management vocabulary before comparing with the model answers.

Quick Answers
- Law sets minimum enforceable rules; ethics concerns responsible conduct. - Waste reduction, fair labor, community support, safety, etc. - Personal interest may improperly influence professional judgment. - Independent approval, segregation of duties, board oversight, audit. - Transparency allows fair management of bias. - Employees, customers, owners, community, suppliers, environment. - False claim, hidden fee, misleading environmental claim. - Trust, reputation, retention, lower misconduct risk.

Independent Practice
- Apply the lesson to a small school, shop, NGO, or service business. - Explain one advantage and one limitation of the main concept. - Create one deliberately weak management decision, then improve it. - Write a 60-80 word mini-case and propose a practical response.

Exam Strategy
- Define the concept before evaluating it. - Use case evidence rather than generic statements. - For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections
Record one mistake, the correction, and the management principle behind it.

LESSON 26 - CORE MANAGEMENT

Strategic Management

Environmental analysis, competitive advantage, SWOT, strategic choice, and implementation.

Learning Objectives

- Explain the purpose of strategy.
- Use SWOT as a structured summary rather than a list.
- Link strategic choice to implementation.

Concept	Explanation	Example
Strategy	Long-term choices about direction, scope, and resource allocation.	Focus on a defined market niche.
SWOT	Strengths, weaknesses, opportunities, and threats.	Strong brand vs new low-cost competitor.
Competitive advantage	A capability or position that creates superior customer value or lower cost.	Reliable distribution network.
Implementation	Turning strategy into actions, budgets, responsibilities, and measures.	Assign projects and KPIs to strategic priorities.

Key Principles

- Strengths and weaknesses are internal; opportunities and threats are external.
- Strategy requires trade-offs; trying to pursue everything can dilute resources.
- A strategy is incomplete without execution, measurement, and review.

Study Tip

Use SWOT to generate and evaluate actions; do not treat the four lists as the final answer.

Extra Model Examples

1. Use evidence for each SWOT point.
2. Convert analysis into strategic options.
3. Allocate resources to priorities.
4. Monitor strategic indicators.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 26 - PRACTICE

Strategic Management

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Define strategy.	2. Which SWOT elements are internal?
3. Which SWOT elements are external?	4. Give one example of competitive advantage.
5. Why are trade-offs important in strategy?	6. Turn one SWOT point into an action.
7. What is implementation?	8. Name one strategic KPI.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Long-term choices about direction, scope, and resources.
2. Strengths and weaknesses.
3. Opportunities and threats.
4. Brand, technology, cost advantage, distribution, know-how.
5. Resources are limited and choices require priorities.
6. Example: use strong distribution to enter underserved region.
7. Turning strategy into responsibilities, resources, and actions.
8. Market share, margin, customer retention, impact, etc.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 27 - CORE MANAGEMENT

Risk Management

Risk identification, assessment, controls, contingency planning, and monitoring.

Learning Objectives

- Define risk in management terms.
- Use likelihood and impact to prioritize risks.
- Select appropriate risk responses.

Concept	Explanation	Example
Risk	Uncertainty that can affect objectives positively or negatively.	Supplier failure delays a project.
Risk assessment	Evaluation of likelihood and impact.	High-likelihood/high-impact risks receive priority.
Risk response	Avoid, reduce, transfer/share, or accept.	Insure a valuable asset.
Control	Measure designed to prevent, detect, or correct a problem.	Approval limits for payments.

Key Principles

- Risk management does not eliminate all uncertainty.
- Controls should be proportionate to the risk and cost-effective.
- Residual risk remains after controls are applied.

Study Tip

For each risk, state the cause, event, consequence, control, owner, and residual risk.

Extra Model Examples

1. Maintain a risk register.
2. Assign a risk owner.
3. Test backup systems.
4. Review risk ratings as conditions change.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 27 - PRACTICE

Risk Management

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice	
1. Define risk.	2. What two dimensions are commonly used in risk assessment?
3. Name four risk responses.	4. What is residual risk?
5. Give one preventive control.	6. Give one detective control.
7. What should a risk register contain?	8. Why assign a risk owner?

Mastery Challenge
- Write two original business examples that demonstrate the main idea of this lesson. - Support your answer with one reason, example, calculation, or stakeholder effect where relevant. - Check your use of management vocabulary before comparing with the model answers.

Quick Answers
- Uncertainty affecting objectives. - Likelihood and impact. - Avoid, reduce, transfer/share, accept. - Risk remaining after controls. - Approval limits, access controls, preventive maintenance. - Reconciliation, review, alarm, audit. - Risk, cause, impact, rating, control, owner, action/status. - To make responsibility clear.

Independent Practice
- Apply the lesson to a small school, shop, NGO, or service business. - Explain one advantage and one limitation of the main concept. - Create one deliberately weak management decision, then improve it. - Write a 60-80 word mini-case and propose a practical response.

Exam Strategy
- Define the concept before evaluating it. - Use case evidence rather than generic statements. - For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections
Record one mistake, the correction, and the management principle behind it.

LESSON 28 - CORE MANAGEMENT

Project Management

Scope, schedule, resources, milestones, stakeholders, and project control.

Learning Objectives

- Explain the project life cycle.
- Use scope, time, cost, and quality constraints.
- Monitor milestones, issues, and changes.

Concept	Explanation	Example
Project	Temporary work undertaken to create a defined result.	Launch a new information system.
Scope	Work and deliverables included in the project.	Specified modules, locations, and outputs.
Milestone	Important checkpoint with no duration or a major deliverable.	User testing completed.
Critical activity	Task whose delay can affect the project completion date.	Final installation before launch.

Key Principles

- Uncontrolled scope changes can increase cost and delay delivery.
- Project plans should define tasks, owners, dependencies, resources, and deadlines.
- Stakeholder communication is a project control tool.

Study Tip

Separate “must-have” scope from optional improvements to protect deadlines and budget.

Extra Model Examples

1. Create a work breakdown structure.
2. Track planned vs actual progress.
3. Record issues and decisions.
4. Approve significant changes formally.

Management Analysis Routine

Step 1: Identify the management problem, objective, or decision.

Step 2: Select the relevant concept, data, and stakeholders.

Step 3: Compare alternatives using benefits, costs, risks, and constraints.

Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 28 - PRACTICE

Project Management

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Define project scope.	2. What is a milestone?
3. Give one project constraint.	4. What is scope creep?
5. Why map dependencies?	6. Name one project monitoring tool or record.
7. Why control changes formally?	8. Give one stakeholder communication action.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Defined work and deliverables included.
2. Major checkpoint/deliverable.
3. Scope, time, cost, quality/resources.
4. Uncontrolled increase in project scope.
5. Dependencies determine sequence and schedule risk.
6. Schedule, issue log, risk register, status report.
7. To assess effects on time, cost, quality, and accountability.
8. Regular status update or stakeholder meeting.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 29 - CORE MANAGEMENT

Digital Management and Information Systems

Data, information, digital workflows, cybersecurity, and management information.

Learning Objectives

- Explain how information supports management decisions.
- Distinguish data from useful information.
- Identify basic digital and cybersecurity management controls.

Concept	Explanation	Example
Data	Raw facts or observations.	Individual sales transactions.
Information	Processed data with context and meaning.	Weekly sales trend by product.
Management information system	People, processes, and technology providing information for decisions.	Dashboard showing budget, sales, and stock.
Cybersecurity control	Measure protecting confidentiality, integrity, and availability.	Access control and regular backups.

Key Principles

- More data is not automatically better information.
- Information should be accurate, timely, relevant, secure, and accessible to authorized users.
- Digital transformation requires process and people changes, not only new software.

Study Tip

Ask what decision the information will support before designing a report or dashboard.

Extra Model Examples

1. Use role-based access.
2. Back up critical records.
3. Validate dashboard definitions.
4. Train users when systems change.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 29 - PRACTICE

Digital Management and Information Systems

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Distinguish data and information.	2. Give one MIS output.
3. Name three qualities of useful information.	4. Give one cybersecurity control.
5. Why use role-based access?	6. Why are backups important?
7. What is digital transformation beyond software?	8. Write one dashboard question linked to a decision.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Data = raw facts; information = processed data with meaning.
2. Dashboard/report/alert.
3. Accurate, timely, relevant, complete enough, secure.
4. Access control, MFA, backup, patching, encryption.
5. Users receive only needed permissions.
6. Support recovery from loss or attack.
7. Process redesign, skills, governance, culture, data use.
8. Example: which product has rising stock but falling sales?

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

LESSON 30 - CORE MANAGEMENT

Business Plan and Integrated Management Review

Integrating strategy, marketing, operations, people, finance, risk, and implementation.

Learning Objectives

- Identify the main sections of a business plan.
- Connect assumptions across management functions.
- Evaluate overall feasibility and implementation readiness.

Concept	Explanation	Example
Executive summary	Concise overview of the opportunity, model, and key financial/operational points.	One-page summary for decision makers.
Market plan	Target customers, research evidence, competition, and marketing mix.	Customer segment and go-to-market approach.
Operations plan	Processes, capacity, suppliers, resources, and quality.	Staffing and delivery workflow.
Financial plan	Costs, revenues, cash flow, finance needs, and assumptions.	12-month cash forecast and break-even estimate.

Key Principles

- A business plan is only as strong as its assumptions and evidence.
- Marketing forecasts must be consistent with operational capacity and financial projections.
- Major risks should have practical mitigation and contingency actions.

Study Tip

Check consistency: expected sales, production capacity, staffing, inventory, financing, and cash flow must tell the same story.

Extra Model Examples

1. State assumptions explicitly.
2. Test optimistic and conservative scenarios.
3. Assign implementation owners.
4. Review progress against milestones and cash position.

Management Analysis Routine

- Step 1: Identify the management problem, objective, or decision.
- Step 2: Select the relevant concept, data, and stakeholders.
- Step 3: Compare alternatives using benefits, costs, risks, and constraints.
- Step 4: Recommend an action and explain how results will be measured.

Your Example

Write one short business example that applies the lesson concept.

LESSON 30 - PRACTICE

Business Plan and Integrated Management Review

Common errors, guided practice, and mastery check

Common error	Better approach	Why?
"One management method is always best."	Choose the approach that fits objectives, evidence, stakeholders, and constraints.	Management decisions are context-dependent.
"A recommendation is complete without evidence."	Support recommendations with case facts, data, assumptions, or clear reasoning.	Evidence improves decision quality and exam analysis.

Guided Practice

1. Name six sections of a business plan.	2. Why state assumptions explicitly?
3. What is scenario analysis?	4. How should sales forecast and capacity relate?
5. Name one implementation milestone.	6. Give one business-plan risk and mitigation.
7. Why monitor cash during implementation?	8. Explain one cross-functional consistency check.

Mastery Challenge

- Write two original business examples that demonstrate the main idea of this lesson.
- Support your answer with one reason, example, calculation, or stakeholder effect where relevant.
- Check your use of management vocabulary before comparing with the model answers.

Quick Answers

1. Executive summary, market, marketing, operations, organization/HR, finance, risk/implementation.
2. So reviewers can test logic and update projections.
3. Testing results under different assumptions.
4. Forecast sales must not exceed feasible delivery without capacity plan.
5. Pilot launch, permit, hiring, system go-live, first sales, etc.
6. Answers vary if risk and mitigation match.
7. Cash shortages can stop an otherwise viable plan.
8. Sales, capacity, staffing, inventory, funding, and cash assumptions must align.

Independent Practice

- A. Apply the lesson to a small school, shop, NGO, or service business.
- B. Explain one advantage and one limitation of the main concept.
- C. Create one deliberately weak management decision, then improve it.
- D. Write a 60-80 word mini-case and propose a practical response.

Exam Strategy

- Define the concept before evaluating it.
- Use case evidence rather than generic statements.
- For calculations, show the formula, substitution, answer, and interpretation.

Notes & Corrections

Record one mistake, the correction, and the management principle behind it.

REVISION 01

Review Test 1 - Management Foundations

Mixed practice - complete without looking back at the lessons.

#	Lesson	Question
1	Introduction to Management	Define management in one sentence.
2	Introduction to Management	Give one example of efficiency.
3	Introduction to Management	Give one example of effectiveness.
4	Business Organizations and Objectives	Classify a state hospital: public, private, or nonprofit.
5	Business Organizations and Objectives	Name two stakeholders of a retail business.
6	Business Organizations and Objectives	Rewrite "increase sales" as a SMART objective.
7	Functions of Management	Name the four core functions.
8	Functions of Management	Which function assigns responsibilities?
9	Functions of Management	Which function compares results with standards?
10	Planning and Decision-Making	Distinguish strategic and operational planning.
11	Planning and Decision-Making	List four decision criteria.
12	Planning and Decision-Making	Define contingency plan.

Writing Task

- Write a short management response (100-130 words) using at least four concepts from this review.
- Include one practical example or calculation where appropriate.
- End with a justified recommendation or conclusion.

Self-Assessment

- 10-12 correct: Strong mastery.
- 7-9 correct: Good progress; review minor errors.
- 4-6 correct: Revisit the related lessons.
- 0-3 correct: Study the lesson explanations before retrying.

Writing Task Response

Use the space below for your response, key points, evidence, and recommendation.

REVISION 02

Review Test 2 - Structure, Leadership & Communication

Mixed practice - complete without looking back at the lessons.

#	Lesson	Question
1	Organizational Structure	What is delegation?
2	Organizational Structure	Name three common structures.
3	Organizational Structure	Explain span of control.
4	Leadership	Define autocratic leadership.
5	Leadership	Give one situation for democratic leadership.
6	Leadership	Why might experts value autonomy?
7	Motivation at Work	Give two financial motivators.
8	Motivation at Work	Give two nonfinancial motivators.
9	Motivation at Work	Distinguish intrinsic and extrinsic motivation.
10	Communication in Organizations	Name the main elements of the communication process.
11	Communication in Organizations	Give one formal channel.
12	Communication in Organizations	Give one informal channel.

Writing Task

- Write a short management response (100-130 words) using at least four concepts from this review.
- Include one practical example or calculation where appropriate.
- End with a justified recommendation or conclusion.

Self-Assessment

- 10-12 correct: Strong mastery.
- 7-9 correct: Good progress; review minor errors.
- 4-6 correct: Revisit the related lessons.
- 0-3 correct: Study the lesson explanations before retrying.

Writing Task Response

Use the space below for your response, key points, evidence, and recommendation.

REVISION 03

Review Test 3 - Human Resources & Operations

Mixed practice - complete without looking back at the lessons.

#	Lesson	Question
1	Human Resource Management	Define workforce planning.
2	Human Resource Management	Name three HR responsibilities.
3	Human Resource Management	Give one HR metric.
4	Recruitment and Selection	Distinguish job description and person specification.
5	Recruitment and Selection	Give one benefit of internal recruitment.
6	Recruitment and Selection	Give one benefit of external recruitment.
7	Training and Performance Management	What is a training needs analysis?
8	Training and Performance Management	Give one on-the-job method.
9	Training and Performance Management	Give one off-the-job method.
10	Operations Management	List four inputs to an operation.
11	Operations Management	Define transformation process.
12	Operations Management	Name five operations objectives.

Writing Task

- Write a short management response (100-130 words) using at least four concepts from this review.
- Include one practical example or calculation where appropriate.
- End with a justified recommendation or conclusion.

Self-Assessment

- 10-12 correct: Strong mastery.
- 7-9 correct: Good progress; review minor errors.
- 4-6 correct: Revisit the related lessons.
- 0-3 correct: Study the lesson explanations before retrying.

Writing Task Response

Use the space below for your response, key points, evidence, and recommendation.

REVISION 04

Review Test 4 - Production, Quality & Supply

Mixed practice - complete without looking back at the lessons.

#	Lesson	Question
1	Production Methods and Capacity	Identify job, batch, or flow: custom wedding cake.
2	Production Methods and Capacity	Identify job, batch, or flow: bottled water line.
3	Production Methods and Capacity	Calculate utilization: 750/1000.
4	Quality Management	Distinguish quality control and assurance.
5	Quality Management	Give one quality indicator.
6	Quality Management	What is continuous improvement?
7	Inventory and Supply Chain Management	Why hold inventory?
8	Inventory and Supply Chain Management	Give one cost of too much stock.
9	Inventory and Supply Chain Management	Give one risk of too little stock.

Writing Task

- Write a short management response (100-130 words) using at least four concepts from this review.
- Include one practical example or calculation where appropriate.
- End with a justified recommendation or conclusion.

Self-Assessment

- 10-12 correct: Strong mastery.
- 7-9 correct: Good progress; review minor errors.
- 4-6 correct: Revisit the related lessons.
- 0-3 correct: Study the lesson explanations before retrying.

Writing Task Response

Use the space below for your response, key points, evidence, and recommendation.

REVISION 05

Review Test 5 - Marketing Management

Mixed practice - complete without looking back at the lessons.

#	Lesson	Question
1	Marketing Management	Define market segmentation.
2	Marketing Management	Give four segmentation bases.
3	Marketing Management	What is targeting?
4	Market Research	Distinguish primary and secondary research.
5	Market Research	Give one qualitative method.
6	Market Research	Give one quantitative method.
7	Marketing Mix	Name the 4Ps.
8	Marketing Mix	Name the three additional service Ps.
9	Marketing Mix	Give one pricing approach.

Writing Task

- Write a short management response (100-130 words) using at least four concepts from this review.
- Include one practical example or calculation where appropriate.
- End with a justified recommendation or conclusion.

Self-Assessment

- 10-12 correct: Strong mastery.
- 7-9 correct: Good progress; review minor errors.
- 4-6 correct: Revisit the related lessons.
- 0-3 correct: Study the lesson explanations before retrying.

Writing Task Response

Use the space below for your response, key points, evidence, and recommendation.

REVISION 06

Review Test 6 - Finance & Accounting

Mixed practice - complete without looking back at the lessons.

#	Lesson	Question
1	Financial Management	Define liquidity.
2	Financial Management	Define profitability.
3	Financial Management	What is working capital?
4	Sources of Finance	Give one internal source of finance.
5	Sources of Finance	Give three external sources.
6	Sources of Finance	Which source suits a temporary cash shortage?
7	Budgeting and Cash Flow	Define cash inflow.
8	Budgeting and Cash Flow	Define cash outflow.
9	Budgeting and Cash Flow	Calculate closing cash: $5,000 + 8,000 - 10,500$.
10	Accounting Basics	State the accounting equation.
11	Accounting Basics	Classify cash: asset, liability, or equity.
12	Accounting Basics	Classify bank loan.

Writing Task

- Write a short management response (100-130 words) using at least four concepts from this review.
- Include one practical example or calculation where appropriate.
- End with a justified recommendation or conclusion.

Self-Assessment

- 10-12 correct: Strong mastery.
- 7-9 correct: Good progress; review minor errors.
- 4-6 correct: Revisit the related lessons.
- 0-3 correct: Study the lesson explanations before retrying.

Writing Task Response

Use the space below for your response, key points, evidence, and recommendation.

REVISION 07

Review Test 7 - Entrepreneurship, Ethics & Strategy

Mixed practice - complete without looking back at the lessons.

#	Lesson	Question
1	Entrepreneurship and Innovation	Define value proposition.
2	Entrepreneurship and Innovation	Give one example of an opportunity.
3	Entrepreneurship and Innovation	What is a business model?
4	Business Ethics and Corporate Social Responsibility	Distinguish law and ethics.
5	Business Ethics and Corporate Social Responsibility	Give one CSR activity.
6	Business Ethics and Corporate Social Responsibility	Define conflict of interest.
7	Strategic Management	Define strategy.
8	Strategic Management	Which SWOT elements are internal?
9	Strategic Management	Which SWOT elements are external?

Writing Task

- Write a short management response (100-130 words) using at least four concepts from this review.
- Include one practical example or calculation where appropriate.
- End with a justified recommendation or conclusion.

Self-Assessment

- 10-12 correct: Strong mastery.
- 7-9 correct: Good progress; review minor errors.
- 4-6 correct: Revisit the related lessons.
- 0-3 correct: Study the lesson explanations before retrying.

Writing Task Response

Use the space below for your response, key points, evidence, and recommendation.

REVISION 08

Review Test 8 - Risk, Projects, Digital & Business Plan

Mixed practice - complete without looking back at the lessons.

#	Lesson	Question
1	Risk Management	Define risk.
2	Risk Management	What two dimensions are commonly used in risk assessment?
3	Risk Management	Name four risk responses.
4	Project Management	Define project scope.
5	Project Management	What is a milestone?
6	Project Management	Give one project constraint.
7	Digital Management and Information Systems	Distinguish data and information.
8	Digital Management and Information Systems	Give one MIS output.
9	Digital Management and Information Systems	Name three qualities of useful information.
10	Business Plan and Integrated Management Review	Name six sections of a business plan.
11	Business Plan and Integrated Management Review	Why state assumptions explicitly?
12	Business Plan and Integrated Management Review	What is scenario analysis?

Writing Task

- Write a short management response (100-130 words) using at least four concepts from this review.
- Include one practical example or calculation where appropriate.
- End with a justified recommendation or conclusion.

Self-Assessment

- 10-12 correct: Strong mastery.
- 7-9 correct: Good progress; review minor errors.
- 4-6 correct: Revisit the related lessons.
- 0-3 correct: Study the lesson explanations before retrying.

Writing Task Response

Use the space below for your response, key points, evidence, and recommendation.

ANSWER KEY

Answer Key - Part 1

Use this section after completing the revision tests independently.

Review Test 1

1	Coordinating resources and people to achieve objectives.
2	Same output with less time/cost/waste.
3	Achieving the intended target.
4	Public.
5	Customers and employees (others possible).
6	Example: increase monthly sales by 8% within six months.
7	Planning, organizing, leading, controlling.
8	Organizing.
9	Controlling.
10	Strategic = long-term whole-organization; operational = short-term detailed.
11	Cost, time, risk, impact/quality/feasibility.
12	Prepared alternative action for uncertainty.

Review Test 2

1	Transfer authority for a task while manager retains accountability.
2	Functional, divisional, matrix.
3	Number of direct reports supervised by a manager.
4	Leader decides with limited participation.
5	When participation can improve information and commitment.
6	They may need less supervision and value autonomy.
7	Pay, bonus, commission, benefits.
8	Recognition, autonomy, development, meaningful work.
9	Intrinsic comes from the work itself; extrinsic from external reward/consequence.
10	Sender, message, channel, receiver, feedback (with encoding/decoding).
11	Policy memo/report.
12	Informal colleague discussion.

Correction Method

- For every wrong answer, write the correct answer and the reason it is better.
- If the same error repeats, return to the lesson and complete the Mastery Challenge again.
- For numerical questions, check formula, substitution, units, and interpretation.

Error Log

Write the item number, your answer, the correction, and the management principle or formula.

ANSWER KEY

Answer Key - Part 2

Use this section after completing the revision tests independently.

Review Test 3

1	Forecasting workforce numbers and skills needed.
2	Recruitment, training, employee relations, records/policies, performance.
3	Turnover or absenteeism.
4	Description = duties; specification = required person criteria.
5	Lower cost/faster/known employee/career path.
6	Wider talent pool/new ideas.
7	Process for identifying competence gaps.
8	Coaching, mentoring, job rotation, demonstration.
9	Course, workshop, external training.
10	Materials, people, equipment, information, facilities.
11	Activities converting inputs into outputs.
12	Cost, quality, speed, dependability, flexibility.

Correction Method

- For every wrong answer, write the correct answer and the reason it is better.
- If the same error repeats, return to the lesson and complete the Mastery Challenge again.
- For numerical questions, check formula, substitution, units, and interpretation.

Error Log

Write the item number, your answer, the correction, and the management principle or formula.

ANSWER KEY

Answer Key - Part 3

Use this section after completing the revision tests independently.

Review Test 4

1	Job.
2	Flow.
3	75%.
4	Control detects defects; assurance prevents them through process design.
5	Defect rate, return rate, complaint rate.
6	Ongoing small process improvements.
7	Meet demand, buffer uncertainty, support production.
8	Storage, obsolescence, tied-up cash.
9	Stockout, lost sales, stoppage.

Correction Method

- For every wrong answer, write the correct answer and the reason it is better.
- If the same error repeats, return to the lesson and complete the Mastery Challenge again.
- For numerical questions, check formula, substitution, units, and interpretation.

Error Log

Write the item number, your answer, the correction, and the management principle or formula.

ANSWER KEY

Answer Key - Part 4

Use this section after completing the revision tests independently.

Review Test 5

1	Dividing a market into customer groups.
2	Demographic, geographic, psychographic, behavioral.
3	Selecting segment(s) to serve.
4	Primary = new specific data; secondary = existing data.
5	Interview or focus group.
6	Structured survey.
7	Product, price, place, promotion.
8	People, process, physical evidence.
9	Penetration, skimming, competitive, cost-plus, value-based, etc.

Review Test 6

1	Ability to meet short-term obligations.
2	Ability to generate profit relative to activity/resources.
3	Current assets minus current liabilities.
4	Retained profit.
5	Loan, overdraft, trade credit, equity, leasing, etc.
6	Overdraft or other suitable short-term finance.
7	Cash entering the organization.
8	Cash leaving the organization.
9	2,500.
10	Assets = Liabilities + Equity.
11	Asset.
12	Liability.

Correction Method

- For every wrong answer, write the correct answer and the reason it is better.
- If the same error repeats, return to the lesson and complete the Mastery Challenge again.
- For numerical questions, check formula, substitution, units, and interpretation.

Error Log

Write the item number, your answer, the correction, and the management principle or formula.

ANSWER KEY

Answer Key - Part 5

Use this section after completing the revision tests independently.

Review Test 7

1	Reason customers should choose the offer.
2	A valued unmet need with feasible solution.
3	How value is created, delivered, and captured.
4	Law sets minimum enforceable rules; ethics concerns responsible conduct.
5	Waste reduction, fair labor, community support, safety, etc.
6	Personal interest may improperly influence professional judgment.
7	Long-term choices about direction, scope, and resources.
8	Strengths and weaknesses.
9	Opportunities and threats.

Correction Method

- For every wrong answer, write the correct answer and the reason it is better.
- If the same error repeats, return to the lesson and complete the Mastery Challenge again.
- For numerical questions, check formula, substitution, units, and interpretation.

Error Log

Write the item number, your answer, the correction, and the management principle or formula.

ANSWER KEY

Answer Key - Part 6

Use this section after completing the revision tests independently.

Review Test 8

1	Uncertainty affecting objectives.
2	Likelihood and impact.
3	Avoid, reduce, transfer/share, accept.
4	Defined work and deliverables included.
5	Major checkpoint/deliverable.
6	Scope, time, cost, quality/resources.
7	Data = raw facts; information = processed data with meaning.
8	Dashboard/report/alert.
9	Accurate, timely, relevant, complete enough, secure.
10	Executive summary, market, marketing, operations, organization/HR, finance, risk/implementation.
11	So reviewers can test logic and update projections.
12	Testing results under different assumptions.

Correction Method

- For every wrong answer, write the correct answer and the reason it is better.
- If the same error repeats, return to the lesson and complete the Mastery Challenge again.
- For numerical questions, check formula, substitution, units, and interpretation.

Error Log

Write the item number, your answer, the correction, and the management principle or formula.

REFERENCE

Management Formulas & Key Terms

A compact revision page for common calculations and concepts.

Measure	Formula	Meaning
Capacity utilization	$\text{Actual output} / \text{Maximum practical output} \times 100$	Shows how much available capacity is being used.
Labor productivity	$\text{Output} / \text{Labor input}$	Compares output with labor used.
Closing cash	$\text{Opening cash} + \text{Cash inflows} - \text{Cash outflows}$	Shows forecast or actual period-end cash.
Contribution per unit	$\text{Selling price per unit} - \text{Variable cost per unit}$	Amount each unit contributes toward fixed cost and profit.
Break-even output	$\text{Fixed costs} / \text{Contribution per unit}$	Units required for total contribution to equal fixed costs.
Profit	$\text{Total contribution} - \text{Fixed costs}$	Simplified contribution approach.
Margin of safety	$\text{Actual or budgeted sales} - \text{Break-even sales}$	Shows how far sales can fall before reaching break-even.
Working capital	$\text{Current assets} - \text{Current liabilities}$	Short-term net operating resources.

Core Management Vocabulary

Objectives • Stakeholders • Efficiency • Effectiveness • Delegation • Span of control • Motivation • Feedback • Productivity • Capacity • Quality • Lead time • Segmentation • Positioning • Liquidity • Profitability • Variance • Contribution • Break-even • Governance • Strategy • Risk • Milestone • KPI

Calculation Exam Checklist

1. Write the correct formula.
2. Substitute the case figures.
3. Calculate carefully and include units or %.
4. Interpret the result in the business context.
5. State one limitation or decision implication when asked to evaluate.

REFERENCE

Management Quick Guide

Final revision checklist for case analysis, calculations, and recommendations.

Step	What to do
1. Define	State the management concept accurately before applying it.
2. Apply	Use names, figures, constraints, or stakeholder evidence from the case.
3. Analyze	Explain cause and effect: how and why the issue changes performance.
4. Evaluate	Compare benefits, costs, risks, limitations, and stakeholder effects.
5. Recommend	Choose a practical action that fits objectives and evidence.
6. Implement	Specify owner, resources, timing, and key steps.
7. Measure	Use a KPI, budget, milestone, variance, quality measure, or customer outcome.
8. Review	Use results to adjust the next plan and improve continuously.

Before You Submit an Answer

- Have I answered the exact question?
- Have I used case evidence rather than generic statements?
- Have I explained the effect on objectives, stakeholders, finance, or operations?
- If I calculated something, did I interpret the number?
- If I recommended an action, did I justify why it fits better than realistic alternatives?

Final Reminder

Strong management answers connect concepts to evidence, explain consequences, recognize trade-offs, and finish with a justified action or conclusion.
